

NUCLEUS APEX SUPERGRAPH Poster Blueprint (V3.5)

FASTLANE append: ATTACHMENT_HARVEST + MEEK234 rebuild packs inventory + keyword index + timeline candidates + OperatingOrderPin gate

Build: 20260208_2141 Unpacked files: 17 Text-scanned files: 10 Date candidates: 259 Keyword hits files: 10

High-signal deltas (V3.5)

- What was added this cycle
- New inputs ingested: ATTACHMENT_HARVEST_20260208.zip + MEEK234_FULLSTACK_REBUILD_PACK_v20260208.zip (plus recursive nested zips bounded).
 - New: unpacked_file_inventory.csv + ext_counts + top-200 largest files for triage and graph seeding.
 - New: keyword_global_counts.csv + keyword_file_hits.csv (text-first scan; capped per-file bytes).
 - New: date_candidates_raw.csv + timeline_candidates_sorted_top2000.csv (normalized ISO dates when parseable).
 - New: evidenceatom_file_candidates.csv with IntegrityKey per file (file-level atoms).
 - New: OperatingOrderPin schema artifact (YAML) + external tool invocation receipt schemas (JSON).

Date-normalized candidates extracted from text-like files (DRAFT)

Build: 20260208_2141 Unpacked files: 17 Text-scanned files: 10 Date candidates: 239 Keyword hits files: 10

Top timeline candidates (sorted)

timeline_candidates_sorted_top2000.csv (first 40)

[illegible]

Vehicle Validity Gate OperatingOrderPin (V3.5)

Pinned controlling-order requirements before vehicles are considered valid

Build: 20260208_2341 Unpacked files: 17 Text-scanned files: 10 Data candidates: 259 Keyword hits files: 10

OperatingOrderPin schema (append-only)

operating_order_pin_schema.yaml

- Purpose: identify the operative controlling order for a given lane/scope and pin it before emitting any vehicle as valid.
- Required concepts: signed/entered date, ROA/docket entry identifier, service method/date, effective status, supersession/stay links.
- Evidence: file_ref must point to EvidenceAtom (integrity_key + relpath). Unknowns must be explicit UNKNOWN, never inferred.
- Promotion: any quoted order text requires QUOTELOCK verification before FILE_READY/PCG.
- Fields: order_id, court, case_id, title, signed_date, entered_date, roa_entry, service_method, service_date, effective_date, status, superseded_by, stayed_by, file_ref, notes.

External Tooling Pillar Invocation Receipts (V3.5)

Schemas for MCP + diagram lanes; outputs remain system artifacts until promoted

Build: 20260208_2141 Unpacked files: 17 Text-scanned files: 10 Data candidates: 239 Keyword hits: 10

Receipt schemas

external_tool_invocation_receipt_schema.json

- MCPInvocationReceipt: inv_id, ts, tool_id, args_json, status, output_relpath, output_integrity_key, notes.
- DiagramRenderReceipt: render_id, ts, source_relpaths[], output_relpath, output_integrity_key, status, notes.
- Receipt rule: every external tool call yields a receipt row in JSONL (append-only).
- Safety rule: no network by default; enabling any remote calls is an explicit runtime flag in the executable.
